

## Counter DepositSafe

The TellerShield DepositSafe offers safe and quick handling of surplus banknotes at the till whilst giving effective protection against robbery and internal loss.

PRODUCT INFORMATION

### Description

TellerShield DepositSafe enables cashiers to minimise the volume of cash held in their tills by enabling them to deposit excess banknotes into a secure undercounter unit.

Each unit is manufactured from 3mm steel and comes equipped with either a key operated cam lock (PBN) or a motorised lock (PKSN / TSKN) controlled electronically via a code lock with time delay.

The Electronic lock has a manager code, a user code and an emergency override code for increased security.

Each DepositSafe includes an internal cassette to hold the banknotes. This is removable and can be securely transported to the cash office for processing. If required for operational procedures, additional cassettes can be purchased.

Installation is simple with optional mounting positions.

All units are powder-coated in textured paint RAL 9002.

### Dimensions (mm)

PKSN/ PBN: 300 high x 120 wide x 250 deep

TSKN: 155 high x 230 wide x 380 mm deep

### Weight:

PKSN/PBN: 9 kg

TKSN : 11 kg

### Additional features

Robust construction

No power supply required

Simple to use
