

## Dexcon DoorExit Controller

**Dexcon is an effective solution designed for the control and monitoring of emergency exit doors and exit windows**

### Dexcon DoorExit Controller

This battery operated unit offers a high visual deterrence to help secure emergency exit doors or windows.

It operates using a reed contact and can be flexibly positioned on door leaves or frames of door.

Manufactured in rugged red plastic and provided with a STOP sign on a photo luminescent decal for high visibility even in the dark.

If the device is triggered by unauthorised access a 95db alarm is triggered which can be acknowledged by manual key override or programmed to reset automatically after 3 minutes.

The Dexcon has a variety of functions incorporated within the unit:

- For use in sensitive areas a silent alarm can be programmed.
- The volume of the acoustic signal can be reduced to 75db
- In Hotel mode, the automatic alarm shut off is reduced to 30 seconds
- The integrated keyswitch allows authorised alarm free single passage as well the facility for continuous opening.

The standard Dexcon is operated using a 9v battery but it can also be connected to a mains power supply
