SmartAccess-GO

Professional access control made EASY

Imagine being able to easily send your employees, service technicians or customers access authorizations to certain doors to their smartphones and, of course, cancel them at any time or by setting time limits.

With the SmartAccess-GO access solution, you can equip entrance doors with professional access control in no time at all. All you need is a door with an electric strike and the SmartAccess-GO starter set. An electric strike or e-lock is already present on most entrance doors. SmartAccess-GO can also be operated in parallel with existing systems such as door intercoms and access systems.

During installation, only the supplied SmartRelay is connected to control the door opener. The Kentix SmartRelay itself only requires a network connection with PoE and Internet access. Settings on routers or firewalls are not necessary.

With the StarterSet, up to two doors can be controlled and easily opened with any NFC-enabled smartphone. However, the door can also be opened directly via the app by "pressing a button".

The complete software is already included in the SmartRelay, so the authorization data is yours. Thanks to the KentixONE IoT platform, SmartAccess-GO is scalable as desired and enables networking with new or existing Kentix components.

For only
€ 495,-

StarterSet SmartAccess-GO

- 1 SmartRelay
- 4 NFC tags for mounting on the door
- 12 months KentixONE-GO subscription

Numerous flexible applications:

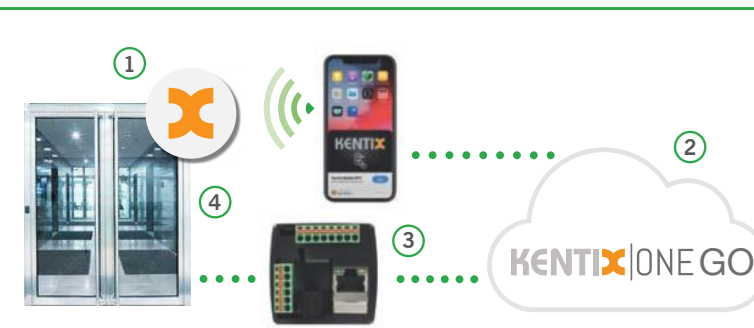

- Office and administrative spaces
- Co-working spaces and housing
- Industry, production and warehouses
- Barrier and gate systems
- Distributed infrastructure (wind turbines, containers)
- Outdoor distribution cabinets

Access simply IP-networked - with ingeniously simple online access control

Who has access where and when? Manage access easily at any time. Pass on authorizations securely from your cell phone. With only two components and little installation effort, smart access solutions can be implemented with the Kentix SmartAccess-GO in a budget-friendly manner.

Infos

A NFC-TAG ① is attached on the door. Similar to a wall reader, the NFC tag is read with the NFC smartphone. KentixONE+ ② establishes a secure connection to the SmartRelay ③ and the signal to open the door ④ is immediately issued to the door opener.
